

# Simplifying IT

## SERVICES AVAILABLE

- **PLATFORM-AS-A-SERVICE (PaaS)**  
Metered hardware usage - Pay only for what you use.
- **SOFTWARE-AS-A-SERVICE (SaaS)**  
On-demand software licensing and support

### CLOUD COMPUTING

- Massively scalable IT infrastructure provided "as a service" over the Internet

### EVERGREEN OFFERINGS

- Constantly refreshed computing infrastructure for the best price/performance ratio

## VIRTUALIZATION TECHNOLOGY THAT WORKS FOR YOUR BUSINESS.

Virtualization technologies have brought about the next stage in the evolution of commodity computing. Small and midsize companies are now able to rapidly scale their applications for end user access on a nationwide or global basis. In addition, the overhead associated with a formal IT department has been significantly reduced. Organizations employing PaaS, SaaS and Cloud Computing can utilize virtual machines to set up web-enabled applications and save significant dollars on the need to physically maintain hardware and network infrastructure. Purchasing computing services through Consort's "Evergreen" pricing structure allows customers to add or subtract servers

based on current end user demand. Beyond this advantage of reduced IT overhead, Consort has the added benefit of decreasing the industry's associated environmental impact through our state-of-the-art data centers.

Consort's mission is to provide innovative and cost-effective business solutions through our data center facilities that provide customers with a distinct competitive advantage. We continually enhance our market position by becoming our client's trusted technology advisor and only measure success in terms of customer satisfaction.
